

Emerald Ash Borer information is now available.

Friday, February 19, 2016 at 4:20 PM

The Borough of Allentown Shade Tree Committee wants you to know about the Emerald Ash Borer (EAB). EAB is a small metallic green invasive insect that attacks and kills ash trees. EAB have been spreading east from the mid-west since 2002 and have now been identified in the local area. All ash trees in the area are subject to attack by EAB and most ash will succumb over the next year or two. There are treatments available for highly valued ash trees. For more information on EAB, visit the NJ Department of Agriculture webpage at <http://www.nj.gov/agriculture/divisions/pi/prog/emeraldashborer.html>.
