

# How to recognize a gas leak

If natural gas pipes become damaged, leaking gas could cause a hazard. Some signs of a gas leak include:

- You smell a “rotten egg” odor.
- You hear a hissing sound coming from the ground.
- You see dirt blowing from a hole in the ground.
- You see water bubbling in a puddle or around a valve box.
- You see a ring or circle of dead grass or vegetation in a lawn area.

## Don't panic, act quickly

If you smell gas, exit the building, move well away from the suspected leak, and **call PSE&G at**

**1-800-880-PSEG**  
(7734)

or, call **911**

You will not be charged for reporting a potential gas leak.

**Call immediately.**
